## **Appendix B. Compliance Procedure and Compliance List**

Listed in this Appendix are the requirements for the compliance statement from the supplier of the Motion Control Function Blocks. The compliance statement consists of two main groups: supported data types and supported Function Blocks, in combination with the applicable inputs and outputs. The supplier is required to fill out the tables for the used data types and Function Blocks, according to their product, committing their support to the specification.

By submitting these tables to PLCopen, and after approval by PLCopen, the list will be published on the PLCopen website, [www.plcopen.org](http://www.plcopen.org) as well as a shortform overview, as specified in Appendix B 2 Supported Data types and Appendix B 3 Overview of the Function Blocks as below.

In addition to this approval, the supplier is granted access and usage rights of the PLCopen Motion Control logo, as described in Appendix B 4:

The PLCopen Motion Control Logo and Its Usage..

### **Data types**

The data type REAL listed in the Function Blocks and parameters (e.g. for velocity, acceleration, distance, etc.) may be exchanged to SINT, INT, DINT or LREAL without to be seen as incompliant to this standard, as long as they are consistent for the whole set of Function Blocks and parameters.

Implementation allows the extension of data types as long as the basic data type is kept. For example: WORD may be changed to DWORD, but not to REAL.

### **Function Blocks and Inputs and Outputs**

An implementation which claims compliance with this PLCopen specification shall offer a set of Function Blocks for motion control, meaning one or more Function Blocks, with at least the **basic** input and output variables, marked as “**B**” in the tables. These inputs and outputs have to be supported to be compliant.

For higher-level systems and future extensions any subset of the **extended** input and output variables, marked as “**E**” in the tables can be implemented.

Vendor specific additions are marked with “**V**”, and can be listed as such in the supplier documentation.

- |                                                        |                                                                   |
|--------------------------------------------------------|-------------------------------------------------------------------|
| - <b>Basic</b> input/output variables are mandatory    | Marked in the tables with the letter “ <b>B</b> ”                 |
| - <b>Extended</b> input /output variables are optional | Marked in the tables with the letter “ <b>E</b> ”                 |
| - <b>Vendor Specific</b> additions                     | Marked in the vendor’s compliance documentation with “ <b>V</b> ” |

All the vendor specific items will not be listed in the comparison table on the PLCopen website, but in the detailed vendor specific list, which also is published.

All vendor specific in- and outputs of all FBs must be listed in the certification list of the supplier. With this, the certification listing from a supplier describes all the I/Os of the relevant FBs, including vendor-specific extensions, and thus showing the complete FBs as used by the supplier.

## Appendix B 1. Statement of Supplier

Supplier name	MITSUBISHI ELECTRIC EUROPE B.V.
Supplier address	Gothaer Str. 8, 40880 Ratingen
City	Ratingen
Country	Germany
Telephone	+49 (0) 2102 486 – 0
Fax	+49 (0) 2102 486 - 4050
Email address	Takayuki.Tsuzuki@mee.mee.com
Product Name	Q Series QD77MS2/QD77MS4/ QD77MS16 Simple Motion Module, GX Works2
Product version	2.0
Release date	17/10/2013

I hereby state that the following tables as filled out and submitted do match our product as well as the accompanying user manual, as stated above.

### Appendix B 3.2 MC\_Home

If Supported	MC_Home	Sup. Y/N	Comments
<b>VAR_IN_OUT</b>			
B	Axis	Y	Reference to the axis.
<b>VAR_INPUT</b>			
B	Execute	Y	
V	HomingMethod	INT	Select the used OPR method (homing method) for carrying out machine OPR (homing).
B	Position	Y	The value must be specified and is interpreted according to the unit setting of the Simple Motion Module ( $10^{-1}$ µm, $10^{-5}$ inch, $10^{-5}$ degree, 1 Pulse).
V	Velocity	REAL	Set the velocity at which homing is performed. The value must be specified and is interpreted according to the unit setting of the Simple Motion Module ( $10^{-2}$ mm/min, $10^{-3}$ inch/min, $10^{-3}$ degree/min, 1 Pulse/second).
V	CreepVelocity	REAL	Set the creep speed after near-point dog ON (low speed just before stopping after decelerating from the OPR speed. The value must be specified and is interpreted according to the unit setting of the Simple Motion Module ( $10^{-2}$ mm/min, $10^{-3}$ inch/min, $10^{-3}$ degree/min, 1 Pulse/second)).

### Appendix B 3.3 MC\_Stop

If Supported	MC_Stop	Sup. Y/N	Comments
<b>VAR_IN_OUT</b>			
B	Axis	Y	Reference to the axis.
<b>VAR_INPUT</b>			
B	Execute	Y	
E	Deceleration	Y	The value specifies the time needed for the speed to decrease from the <b>system set speed limit value</b> (Pr. 8 using ReadParameter / WriteParameter FBs) to <b>zero</b> . The value is specified in ms units (>1 ms).

E	Jerk	N	
<b>VAR_OUTPUT</b>

#### Appendix B 4. The PLCopen Motion Control Logo and Its Usage

For quick identification of compliant products, PLCopen has developed a logo for the Motion Control Function Blocks:

Figure 1: The PLCopen Motion Control Logo

This motion control logo is owned and trademarked by PLCopen.

In order to use this logo free-of-charge, the relevant company has to fulfill all the following requirements:

1. the company has to be a voting member of PLCopen;
2. the company has to comply with the existing specification, as specified by the PLCopen Task Force Motion Control, and as published by PLCopen, and of which this statement is a part;
3. this compliance application is provided in written form by the company to PLCopen, clearly stating the applicable software package and the supporting elements of all the specified tables, as specified in the document itself;
4. in case of non-fulfillment, which has to be decided by PLCopen, the company will receive a written statement concerning this from PLCopen. The company will have a one month period to either adopt their software package in such a way that it complies, represented by the issuing of a new compliance statement, or remove all reference to the specification, including the use of the logo, from all their specification, be it technical or promotional material;
5. the logo has to be used as is - meaning the full logo. It may be altered in size providing the original scale and color setting is kept.
6. the logo has to be used in the context of Motion Control.
